

Article description: Car body floor System CELETTE SYSTEM 5000

Article number: WE190022A

Price: 31 060,97- €

Technical data:

Load capacity of the substrate:	DIN EN 206-1 minimum BSP 16mPa reinforcement ST50
Space requirement:	5.300 x 4.400 x 230 mm
Max. pulling force of the unit on the ground:	10 t per pulling unit
Max. force of the pulling tower:	10 t
Compressed air:	8 bar

Dimensions:

Height pulling tower:	2.600 mm
Length floor frame:	4.800 mm
Width floor frame:	3.900 mm
Mounting:	inground floor / onground floor
Expandable:	yes, in dimension and with frame machine

Product description:

Bodywork quick floor frame straightening workstation for passenger cars and commercial vehicles over 2.2 t payload. The floor frame system 5000 is a rail construction, on which the vehicle can be anchored on the sills as well as the straightening devices. Thanks to its all-round floor rails, very complex as well as short and simple repair operations can be carried out, which can be extended in horizontal and vertical plane by using the straightening tower. The frame construction is recessed flush with the floor or fixed to an existing concrete floor and then poured with concrete to the top edge. This ensures that the workplace is always fully maintained, even if the system is not used. The floor frame can be extended at will both in its dimensions and the number of struts. A combination with our frame machine is also possible.

Advantages at a glance:

- Simple driving and anchoring of the vehicle
- Assembly space is retained and can continue to be used as usual
- Very complex repair operations in different directions can be performed simultaneously
- Access to all areas and repair from the smallest to the heaviest damage
- Upgrade and combination option with electronic measuring system NAJA
- Designed for pulling operations with up to 10 t
