

CELETTE®
CAR LIFE SOLUTIONS

CELETTE is presenting the New 2014 3D Software for the Electronic Measuring System NAJA Evolution. An array of technical innovations is being offer to the Collision repair Professional.

First its ergonomics have been completely re-designed and updated in order to provide to users the best efficiency, a perfect visualization of the control points in 3D with the live targeting of the deviated points and a mapping of the distortions of measures in 3D.

The software is also compatible with the new technologies and usable on tablets.

The system enables you to customization with a multi view screen that can entirely be set up to your need. Points can be added on an existing data sheet, or the user is permitted to create a complete data sheet. You would then get more flexibility in all circumstances faced.

Finally, its connectivity to the Internet gives access to multiple services such as updates, worldwide vehicles database and data storage on the CELETTE Cloud to save and share your data with our Experts.

On the Damaged Vehicle Measuring Market, the NAJA 3D Software is the only product where the ergonomics, customization and connection to the web reaches levels previously unattainable.
